

Pr. Ana Faria

• PhD in Chemistry, Professor at the Faculty of Sciences and Faculty of Medicine, University of Porto, Portugal

Main Interests:

- Polyphenols in health and disease; Metabolic syndrome
- Polyphenols bioavailability and bioactivity: pharmacological characterization and nutritional modulation of transmembrane transport systems involved in the polyphenols uptake in different cellular models
- Effect of bioactive diet components on obesity, inflammation and cancer (chronic morbidities), in order to clarify the biochemical mechanisms for a scientifically supported use in preventive/therapeutic interventions

Presentation during the conference:

Pomegranate and Health in 2009: an overview

- Oxidative stress and pomegranate: What are the strategic roles of Pomegranate
- Safety of dietary supplements of Pomegranate in overweight individual
